Summary

Goal: Holistic digital cockpit HMI with seamless user experience across IVI and Instrument Cluster displays

Approaches:

- Display Sharing
- GPU Sharing
- Surface Sharing
- API Remoting
- **Shared State, Independent Rendering**

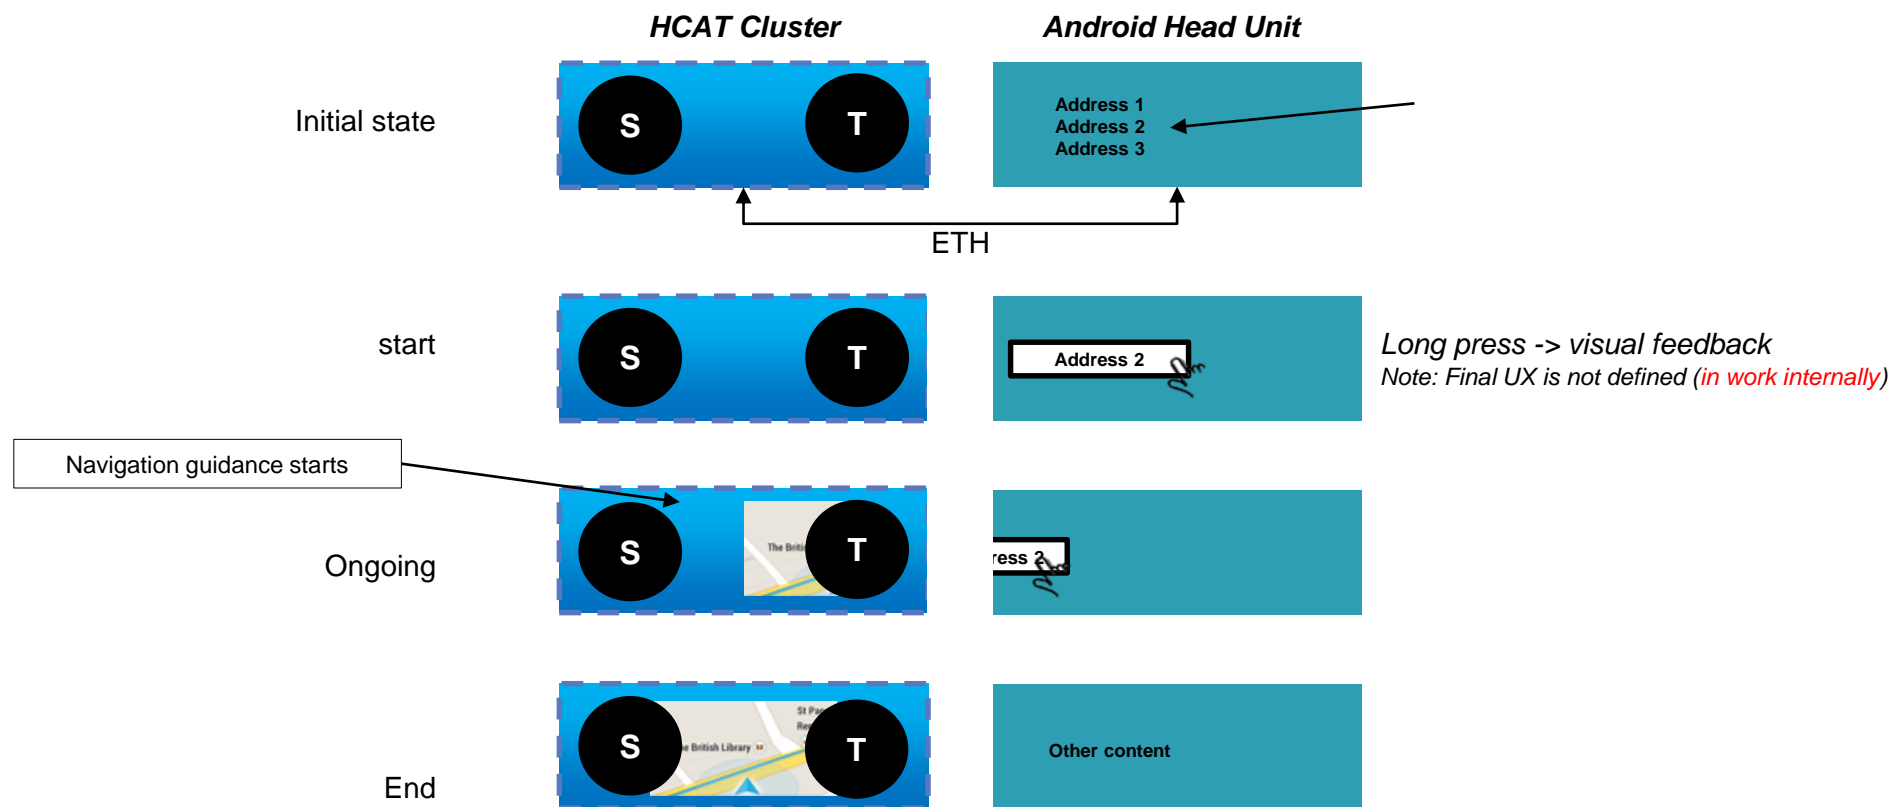

PoC/Demo Details

Implemented prototype of the digital cockpit that is addressing few essential customer use-cases and reusing HMI framework main principles

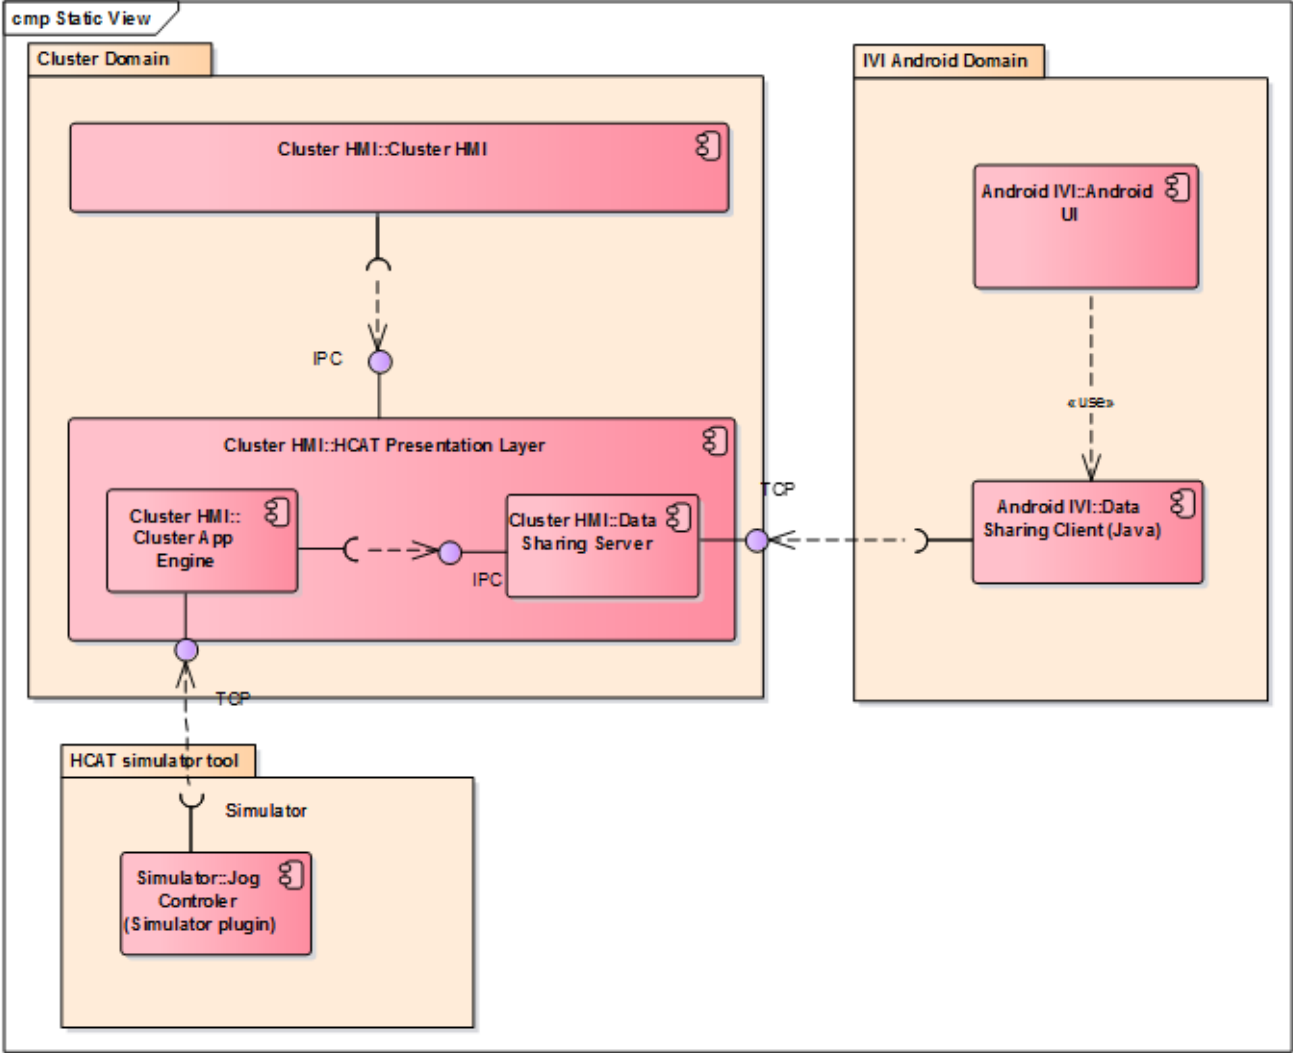

- Important customer cases related to domain interaction
- Using one of domain sharing approaches
- Using Linux and Android SW stacks

OEM scenario

Scope of the demo is to address one of customer use-cases:
“extended cluster”

PoC architecture

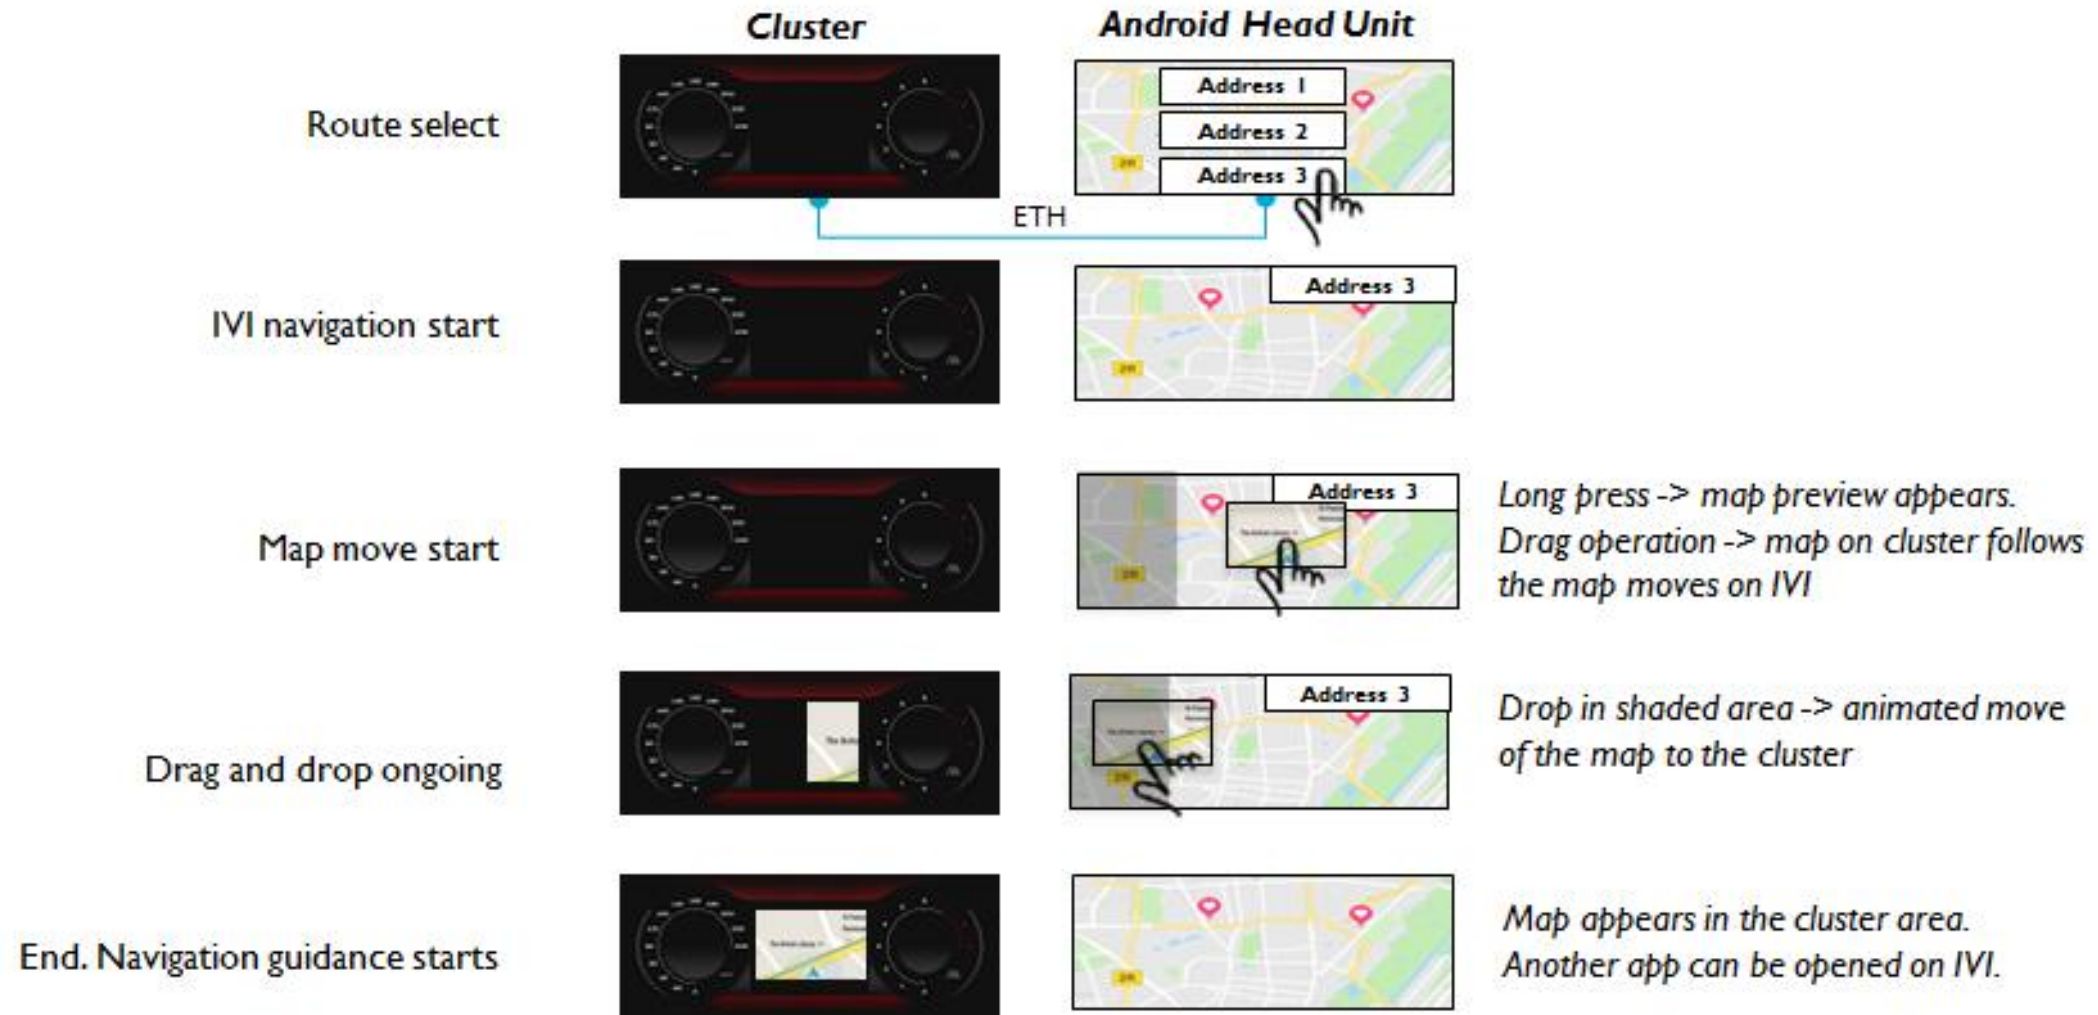

RELEVANCE

Advantages to Shared State, Independent Rendering:

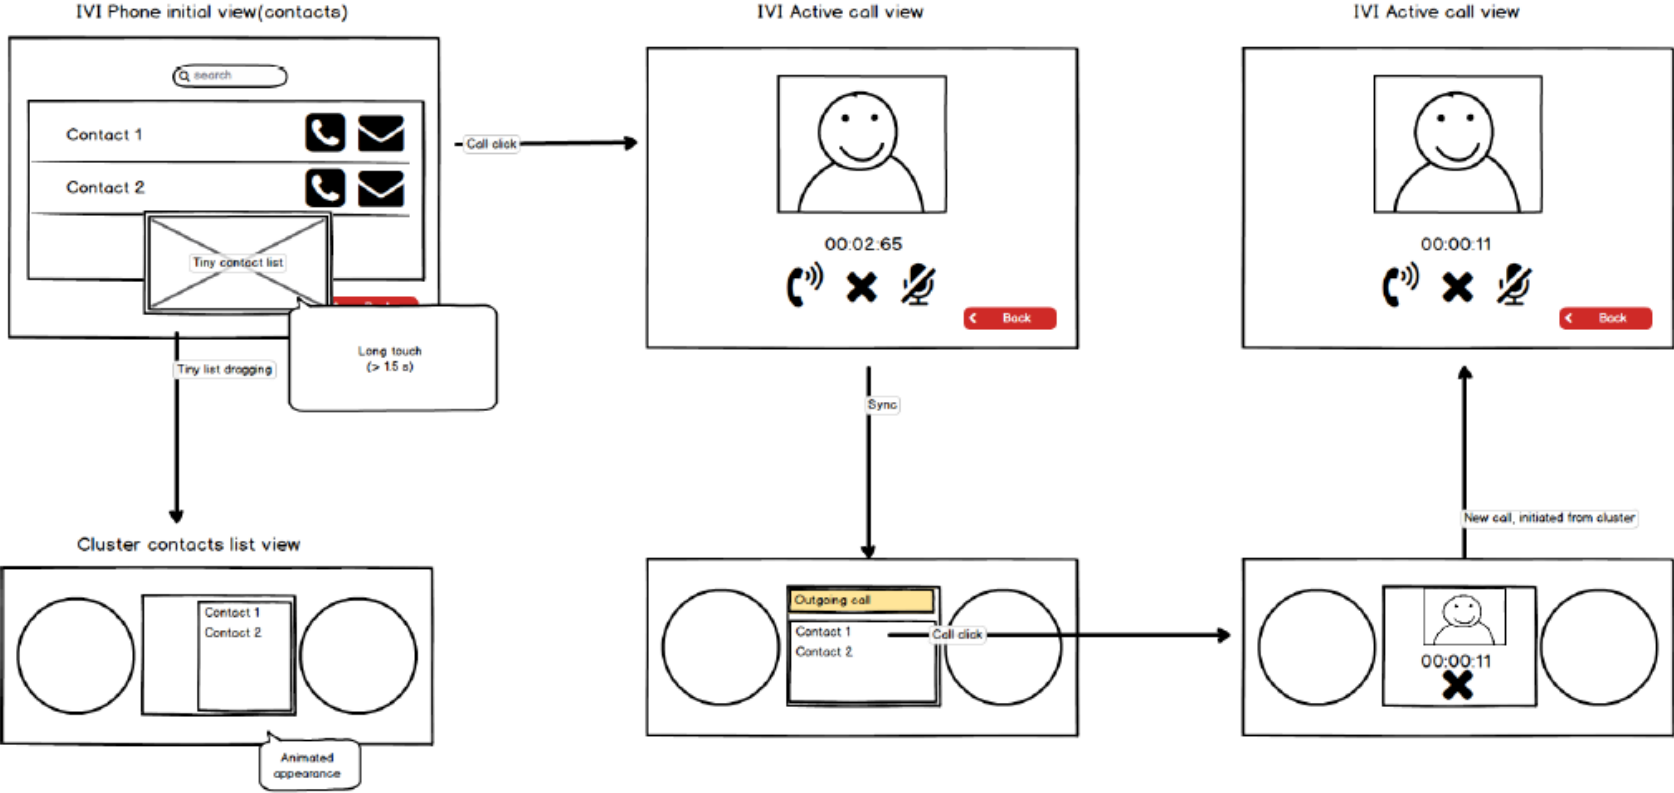

- Low inter-domain data channel bandwidth usage
- Applicability to mid/low performant SoC
- Operating System – agnostic approach

DEMO MAP USE CASE

DEMO PHONE USE CASE

- Phone app sharing and data sync

PoC Technical Info
