TT/minutes/20150713

Previous Minutes (carried forward)[edit]

- new public Confluence is now live for early-adopters/beta test at

https://genivi-oss.atlassian.net/wiki/dashboard.action please could folks who have held back on migrating from GENIVI private confluence try copy-and-paste to see how it looks? (for example see the Parked/Dropped actions at https://trello.com/b/SwTkXMCa/genivi-tools)

- VM distribution was discussed at the BIT meeting. Build and

distribution could be seen as part of the CIAT initiative.

- enumerations: discussed compatibility between commonAPI 3

and Franca 0.9.2 (this is due later in the summer) - currently it is compatible with 0.9.1

```
- good progress. this can be dropped from these minutes
```

- constants

```
- Marco asks: does current version support constants?
- Klaus Uhl - constants are not yet supported publicly (but this has been implemented internally at Intel)
```

- Action GA check docs.projects.genivi.org scripting with PMO

- co-operation with AGL - we clarified that other areas of GENIVI (eg

SAT) are engaged on this for their specific areas of interest. We should focus on Tools Team scope, i.e.

```
- Franca
- IPC
- CIAT (continuous integration and automated test)
 Walt agreed that Franca and IPC topics may be of interest to AGL
```

members.

```
 Now could be a good time to refresh information on the public lists.
 Walt tracked down the original Franca webinar link at
```

https://www.automotivelinux.org/webinar-franca-interface-definition-language

- CI and Automated Test. PS wrote up some thinking on the new wiki at

https://genivi-oss.atlassian.net/wiki/display/TOOL/CIAT. We had some discussion around this, and Walt confirmed that there is an opportunity for collaboration on this, combining experience and resources, adopting a common approach if possible. Walt also noted that AGL plans to use the LTSI test framework

New Topics[edit]

- possible demo of new common api (juergen gehring) - carried forward,

Juergen was not present

Ongoing Tasks (https://trello.com/b/SwTkXMCa/genivi-tools)[edit]

- action KB to check Gunnar's review of Eclipse Automotive vs Eclipse

DSL (https://trello.com/c/qZ7Gl5qN)

- action SL post his GDP patches to the list

(https://trello.com/c/XsJ1DLqK)

Deferred[edit]

- how can Tools Team establish a working environment for users? Does this relate to the Debian initiative? Is this a synonym for SDK?

Patching D-Bus is not an option on people's host environments. (https://trello.com/c/rgLIW9lG) Action PS get Jeremiah to participate if possible

Fall AMM[edit]

- there has been some progress on the automation. FIXME
