

Baserock GENIVI Baseline

The Baserock GENIVI Baseline is an implementation of the GENIVI software stack based on the [Baserock](#) open source project.

The Baserock project has aligned its rolling release cadence to match GENIVI's schedule, so that every Baserock GENIVI Baseline release is validated as part of the mainline Baserock release process. We aim to remove uncertainty and cost from ongoing development and maintenance of embedded systems by keeping things simple, standardized, traceable and repeatable.

Baserock is developed and maintained by Codethink, an associate member of GENIVI whose engineers have made significant contributions a wide range of open source projects including the GENIVI Node Startup Controller, dconf, Vala, GNOME, GTK+, Qt, Tracker, Ubuntu, Debian and the Linux kernel itself.
