

Web browser PoC

Several efforts have been done to provide GENIVI with a web browser on its own.

Chromium has been selected as the base technology to power the GENIVI browser. For information on current status and setup: [Chromium on the GENIVI platform](#).

The "GENIVI Browser Proof-of-Concept" is now known as [Browser HMI API PoC](#). Despite being based on deprecated technology, it is still part of the [GENIVI Demo Platform](#) because it provides a showcase of the GENIVI Browser APIs for HMI.

[Browser Tecnology Evaluation](#) gathers documentation about different technology options to create a modern GENIVI browser.
