

Franca Patterns

Overview

The Franca Patterns project strives to create conventions for how GENIVI Franca IDL interfaces are to be defined. This includes naming, patterns for more abstract elements, higher level behaviours, and so on.

The aim is to be able to create code generators for Franca IDL that provides good toolkit bindings to technologies such as Qt, GTK+ as well as various HTML frameworks.

Concepts

- [Naming](#) - handled by the SAT
 - [Apertis naming guidelines](#)
 - [Qt naming guidelines](#)
- [Big lists](#)
- [Optimistic UI](#)

Meeting Minutes

- [MoM 20160510 Franca Patterns](#) Initial meeting
- [MoM 20160607 Franca Patterns](#)
